

# Pocketbong User Manual

Congratulations to the purchase of our product!

In order to achieve greatest fun with the Pocketbong, you will find below the exact user's instructions informing you about the appropriate construction of the Bong and providing you with some tips and tricks for a simplified use.

It is important to carefully read the instructions before using the Pocketbong for the first time. Otherwise – without following the instructions appropriately – we cannot guarantee for the product.

## Instructions

- Pull the cover, marked with the Pocketbong logo, from the case. You may use the cover as a tobacco mixing plate or may fix it underneath the Bong.
- Now take the quadrinomial Chillum out of the inside of the Bong.

### To disperse the Bong

- Take the smallest and the biggest end of the Bong in your left and right hand and disperse it into the opposite directions. While the single rings are snapping in you can hear a click.

It is possible that not every single ring will snap in immediately during this process, therefore:

- Take the Bong in both hands at the respective ring and disperse the rings individually until they snap in.

Both lowest rings do snap in a little firmer, as the Bong will be filled with water in those parts where it has to seal.

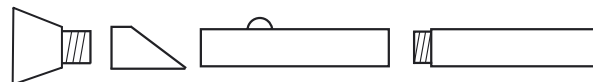

- ☝ If you disperse the single rings too firmly, so that you suddenly have two parts in your hand, we here recommend you to carefully separate the third from the fourth ring (counted from the bottom). That the way how you can re-fix the rings in the right order from the bottom.

- As soon as all rings are properly snapped in, turn the Flash Hole in the position you desire.

### Chillum

- ① Take both tubes and screw them together. The part with the smallest notch is the top part, where the bushing, as demonstrated, will be fixed.
- ② Now you screw the Chillum only very softly onto the tube. One to two screws are sufficient.

- ③ Take the built-together Chillum with the little notch (demonstrated as semi-circle on top of the tube) and wind it up diagonally into the bong.

It is important that the Chillum is imported diagonally into the Bong in order to achieve a long-lasting product life and the most exact waterproofing.

- ④ The notch serves as securing; as soon as the notch has snapped into the interior of the Bong you close the Chillum with the still missing turns until it is fixed and sealed.

- ☝ In the beginning it is useful if you moisten the built-together Chillum with a little bit of oil or soft soap before you fix it together. This facilitates the fixing!

Finished – Your Pocketbong is ready for action!

## The Cleaning

You can clean your Bong either folded or dispersed or separated in all single rings, in a dish washer or with your hands. The Chillum may be cleaned also in a dish washer or manually with a pipe brush.

It is important to clean the Bong properly, as impurities between all rings may cause possible leakages.

We now wish you much joy with your Pocketbong!
